

We are the **largest supplier of security systems** for Europe's Galileo programme

Galileo is Europe's global navigation satellite system, providing a highly accurate, guaranteed global positioning service under civilian control

CGI delivered the **Galileo satellite constellation control facility (SCCF)** which is a fully automated satellite monitor and control system

CGI software **calculates the information broadcast** by the satellites to Galileo users and secures it

250 experts working on Galileo in 5 European countries

CGI is designing, delivering and deploying the core infrastructure for the **Galileo Public Regulated Service (PRS)**

There will be 30 Galileo satellites in orbit

CGI is developing the **Commercial Service**

Delivered the **Galileo security facility** and all **crypto key management facilities**

CGI secures the **ground control and missions segments** of Galileo

2 million lines of code and **100 products** integrated meeting complex, functional and security requirements

Satellites take about 14 hours to orbit the Earth at altitudes of 23,222km

Developing **EPIC** (enabling PRS infrastructure capabilities) for efficient **EU member state** connectivity
