

IT Asset Management Health Check

Most organizations invest a large part of their ICT budget on Hardware and Software assets and most often the investment is decentralized and lack of control over spend.

As a result, organizations would not recognize opportunities for asset optimization, struggle to get insight on spending trend and determine compliance risk

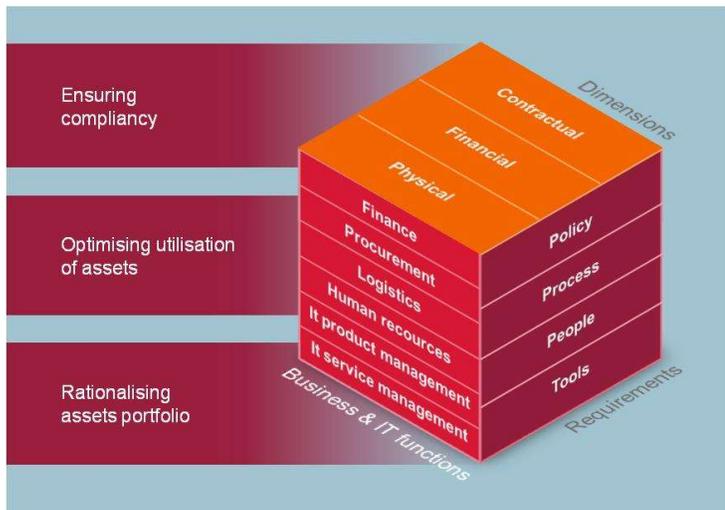

The ICT landscape keeps changing at a high pace and ICT assets are becoming more crucial for business success every day. Getting the best value from your software investments is one of the factors that can give your company a competitive edge.

CGI IT Asset Health check is a first step in optimizing your software assets and getting the most value from them. The check is part of the CGI Framework for IT Asset Management and as shown in the picture below.

ITAM HEALTH CHECK IN BRIEF

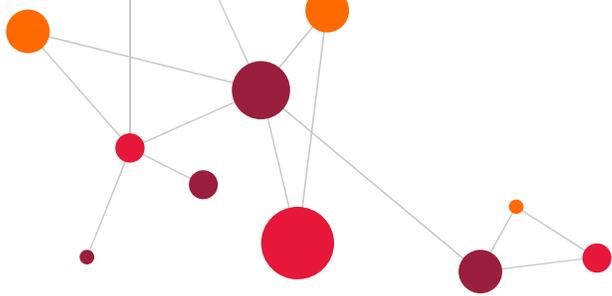

- Determine scope
- Interviews
- Report with recommendations

WHAT IS THE IT ASSET HEALTH CHECK

The IT Asset Health can check all aspects of the lifecycle of your ICT assets in your organization.

After agreeing on the scope of health check CGI initiates the exercise by conducting interviews and analyzing all relevant artifacts

The number of interviews will depend on your organization and the depth of the health check. The interviews are always done by two senior CGI consultants with representatives from strategic, tactical and operational management of the organization.

Most common topics that will be investigated are:

- Data quality
- Ownership and Governance
- Vendor and Contract Management
- Policies and processes
- Architecture
- Orchestration between all of the above

Based on the research and interviews CGI writes a report with its findings and recommendations for quick-, mid- and long term wins. The report will cover the IT Asset Framework components Contractual, financial, physical, policies, people & governance, processes and tools. Each component is rated on the maturity which shall allow organizations to assess and plan to achieve higher maturity.

Examples of recommendations are a revised data center design lower license costs with 80%, processes to revoke unused software, dashboards to get insight etc.
